

PCD tool for Cemented carbide & hard brittle material turning

# SUMIDIA BINDERLESS **NPD10** / SUMIDIA **DA90**

SUMIDIA BINDERLESS  
**NPD10**

For Ultimate  
High-Precision Machining

SUMIDIA  
**DA90**

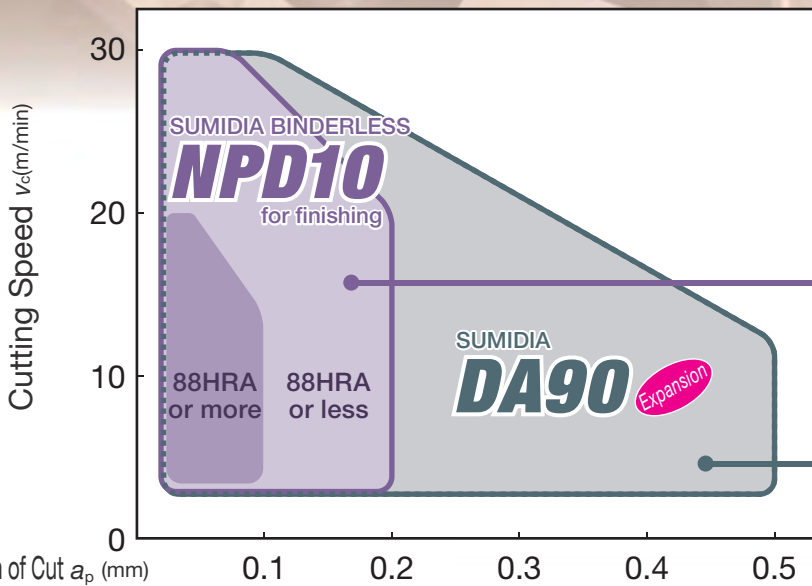

Your Secret Weapon for  
Roughing Cemented Carbides  
and Hard Brittle Materials

SUMIDIA BINDERLESS SUMIDIA

# NPD10/DA90

## Application Range (Cemented Carbide)

● **NPD10**  
Outstanding wear resistance and minimal dimensional shifting when finishing cemented carbide.

● **DA90** Expansion  
Stable tool life when processing sintered surfaces of cemented carbide.

SUMIDIA BINDERLESS

## NPD10

Even with a pure diamond construction, unlike single-crystal diamonds, NPD10 has no anisotropy and adopts a nano-polycrystalline diamond with high hardness for the cutting edge. NPD10 offers improved tool life and machining precision that surpass conventional diamond tools in the machining of cemented carbide and hard brittle materials.

## Ideal for finishing of cemented carbide and hard brittle material

The excellent wear resistance of nano-polycrystalline diamond enables high-precision machining of cemented carbide.

## Maintains superior dimensional tolerances over many hours

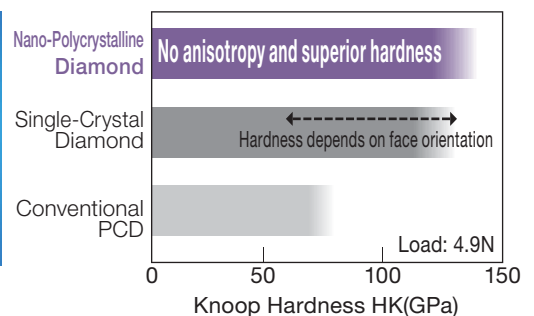

Greatly reduced tool replacements compared to conventional diamond tools will improve work efficiency and reduce total costs.

### ● Nano-Polycrystalline Diamond

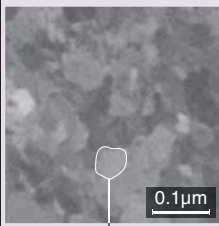

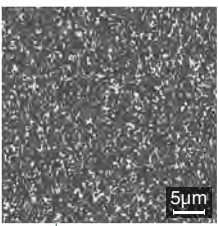

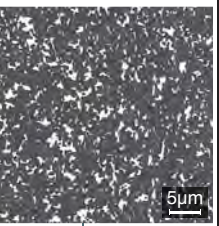

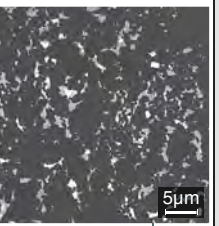

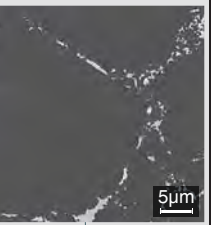

Nano-polycrystalline diamond is a diamond polycrystal that directly binds nanometer-level diamond particles with high strength and without using a binder. SUMIDIA BINDERLESS is harder than single-crystal diamond and has no cleavability. This enables machining of hard brittle materials such as cemented carbides and makes possible new machining methods.

### ● Hardness

## ■ SUMIDIA Grade List

Grade	SUMIDIA BINDERLESS NPD10	SUMIDIA DA1000	SUMIDIA DA2200	SUMIDIA DA150	SUMIDIA DA90
Structure	 Diamond Particles				
Binder	–	Co	Co	Co	Co
Grain Size (µm)	~0.05	~0.5	0.5	5	50
Content (%)	100	90~95	85~90	85~90	90~95

\* Binders appear white on the image.

With densely sintered coarse diamond particles, this polycrystalline diamond grade features a high diamond content for excellent wear resistance even when roughing cemented carbide or other hard brittle materials. The optimal design and incorporation of mass production techniques allows for excellent cost effectiveness with the same performance as conventional models.

## Ideal for roughing of cemented carbide and hard brittle materials

Coarse polycrystalline diamonds offer excellent wear resistance performance, enabling stable tool life when working with sintered surfaces of cemented carbide or roughing hard brittle material.

## Adoption of SUMIDIA NF inserts

The optimal design and incorporation of mass production techniques allows for excellent cost effectiveness with the same performance as conventional models.

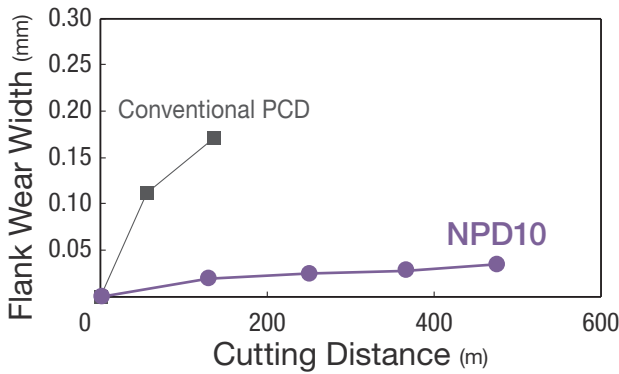

## Newly stocked inserts for cemented carbide and hard brittle material

### ■ NPD10/DA90 Applications (Cemented Carbide)

Grade	SUMIDIA BINDERLESS NPD10	SUMIDIA DA90
Tolerance	◎ Best	△ NPD10 recommended
Tool Life (Wear Resistance)	◎ Best $a_p=0.2\text{mm}$ or less, $f=0.1\text{mm/rev}$ or less recommended	○ $a_p$ =Suitable even for applications of 0.2mm or more
Sintered Surface Processing of Cemented Carbide	✕ Unusable	◎ Best
Machined Surface Quality	◎ Best	△ NPD10 recommended

## Wear Resistance of NPD10

Excellent wear resistance

NPD10  
 $(V_B=0.034\text{mm})$

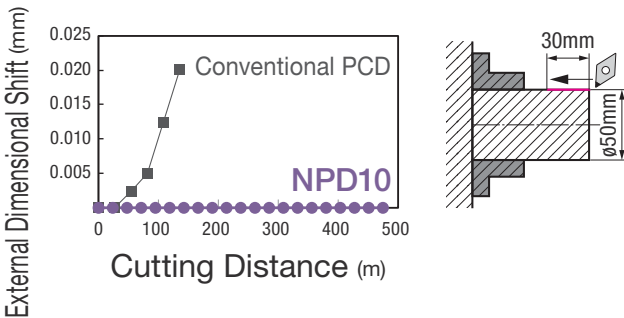

Conventional PCD  
 $(V_B=0.171\text{mm})$

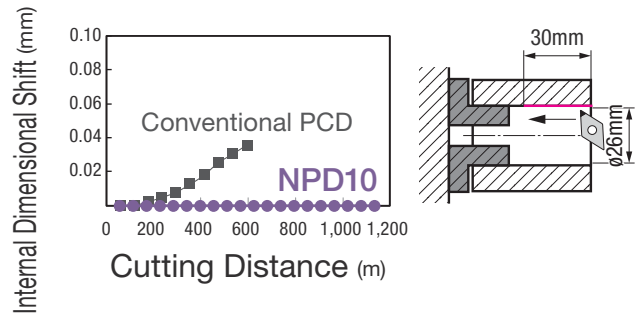

Work Material : Cemented Carbide (87HRA) Tool : DCMW11T304RH  
 Cutting Conditions :  $v_c=20\text{m/min}$   $f=0.1\text{mm/rev}$   $a_p=0.1\text{mm}$  Dry

## Machining Precision of NPD10

NPD10 undergoes no dimensional shift even with a cutting distance of 450m.

NPD10 undergoes no dimensional shift even with a cutting distance of 1,100m.

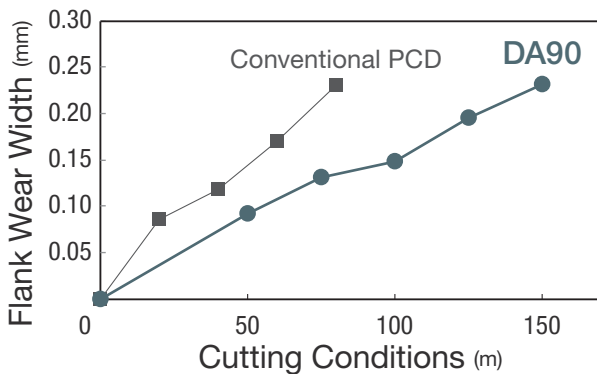

Work Material : Cemented Carbide VC50(87HRA)  
 Tool : DCMW11T304RH  
 Cutting Conditions :  $v_c=20\text{m/min}$   $f=0.1\text{mm/rev}$   $a_p=0.1\text{mm}$  Dry

Work Material : Cemented Carbide VM30(91HRA)  
 Tool : DCMW11T304RH  
 Cutting Conditions :  $v_c=20\text{m/min}$   $f=0.05\text{mm/rev}$   $a_p=0.05\text{mm}$  Dry

## Wear Resistance of DA90

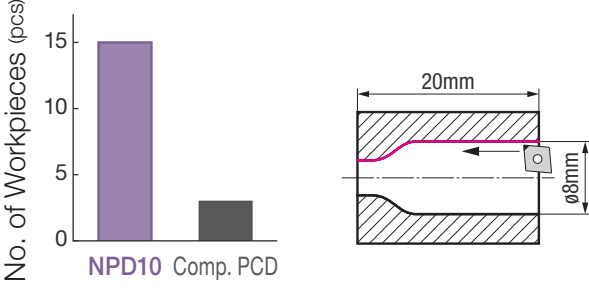

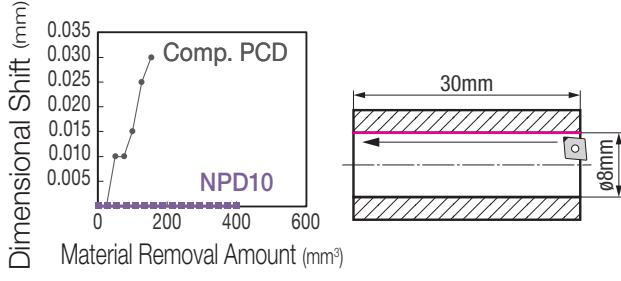

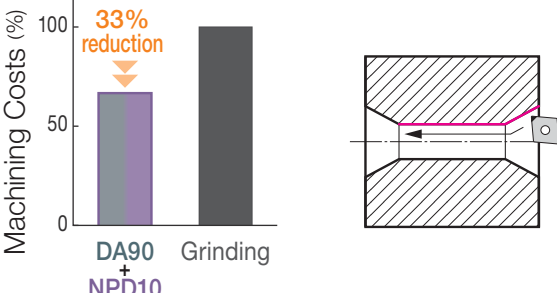

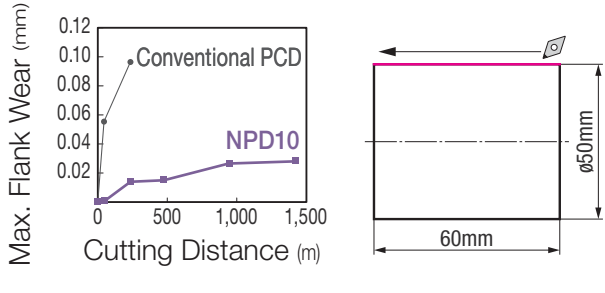

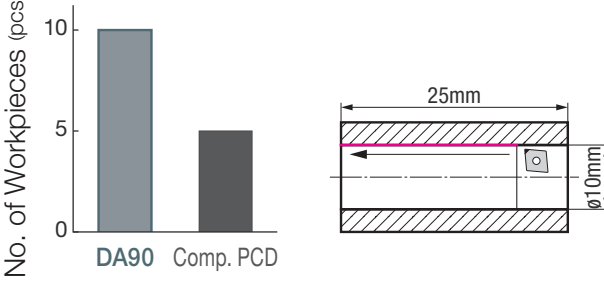

Excellent wear resistance even under roughing conditions.

Work Material : Cemented Carbide VC50(87HRA)  
 Tool : NF-DCMW070204  
 Cutting Conditions :  $v_c=20\text{m/min}$   $f=0.1\text{mm/rev}$   $a_p=0.2\text{mm}$  Wet

Min. - **Optimum** - Max. Coolant : Dry(NPD10)/ Wet(DA90)

## Application Range for NPD10 and DA90

\* A cemented carbide shank toolholder is recommended for internal diameter machining.

- Very hot or lengthy chips may be discharged while the machine is in operation. Therefore, machine guards, safety goggles or other protective covers must be used. Fire safety precautions must also be considered.

**< SAFETY NOTES >**

- Please handle with care as this product has sharp edges.
- Improper cutting conditions or mis-handling of the tool may result in breakages or projectiles. Therefore, please use the tool within its recommended conditions.

- When using non-water soluble cutting oil, precautions against fire must be taken and please ensure that a fire extinguisher is placed near the machine.
